

COLORSTEEL® RANGE

COLORSTEEL® is an innovative and versatile sheet building material, developed and manufactured by New Zealand Steel, that is available in a range of modern colours. With its hard-wearing, baked-on paint finish, COLORSTEEL® pre-painted steel is designed to impede flaking, peeling and fading to deliver long-term, low maintenance performance.

These colour charts have been reproduced, as a guide, to represent as accurately as possible the latest range of COLORSTEEL® colour options for the design of your new X SPAN steel building. However, we recommend checking your chosen colour against an actual steel sample of the product before purchasing, as limitations of web palette colours affect colour tones.
