

COLORSTEEL® RANGE

COLORSTEEL® is an innovative and versatile sheet building material, developed and manufactured by New Zealand Steel, that is available in a range of modern colours. With its hard-wearing, baked-on paint finish, COLORSTEEL® pre-painted steel is designed to impede flaking, peeling and fading to deliver long-term, low maintenance performance.

These colour charts have been reproduced, as a guide, to represent as accurately as possible the latest range of COLORSTEEL® colour options for the design of your new X SPAN steel building. However, we recommend checking your chosen colour against an actual steel sample of the product before purchasing, as limitations of web palette colours affect colour tones.

MAXAM COLOUR PALETTE
